

ABSTRACT OF THE DISCLOSURE

A control box 10 according to the present invention has at least one electric device 12 and fan unit 17 inside a case 11. In the case 11, a dividing board 15 divides a room into two rooms which include a heated room 30, close to the electric device 12, and a ventilated room 31. First and second openings 24B, 24A open the heated and ventilated rooms 30, 31 to the outside of the case 11, respectively. The fan unit 17 is disposed on a window penetrating the dividing board 15 and feeds air from one of two rooms to another.
